

Would you like to benefit from the
proven technology of the world's
most advanced ATMs?

YES

NCR SelfServ™

ATMs designed to meet the challenges of today's retail banking institutions

Experience a new world of interaction

Everything NCR has learned about self-service over the last 125 years is here.

As more customers expect and demand self-service banking, your choice of ATM is more important than ever. With the right ATMs, you can deliver a better customer experience, grow your market share, reduce your operating costs and increase your cross-sell ratios and revenues. NCR SelfServ can help you do all of the above. It's a range of ATMs designed specifically to meet the challenges of today's retail banking institutions and help you realize the full potential of your retail strategies.

NCR SelfServ is the only range of ATMs that can offer every transaction in every location type — through-the-wall, lobby or drive-up. Our ATMs are designed to accommodate future functions and features, like contactless technology, including NFC. They also reflect NCR's commitment to environmental responsibility at every stage of product life.

Put simply, this range of ATMs embodies everything that NCR has learned about consumer interactions, transaction processing and self-service over the last 125 years. And it has the power to transform your retail banking business.

Redefined Availability

ATM availability is usually measured in terms of averages. But a good average is no consolation in the midst of a failed customer interaction. NCR SelfServ ATMs are designed to deliver true availability — so your customers can make the transactions they want, where and when they want them.

- NCR SelfServ's "Self-healing" capabilities provide automatic return to service after "soft" failures, reducing downtime from hours to minutes
- Our ATMs are designed for faster, simpler first line maintenance, with state-of-the-art operator panels and service accessibility from the front, rear and side
- Activity counters record the precise workload of each module — not just the total number of transactions — so you know when it's reaching the end of its expected life
- NCR SelfServ ATMs are designed to work with our Self-Service Diagnostic Gateway, allowing us to make proactive, remote repairs

Intuitive Usability

Every time your customers use your ATM, they're quite literally touching your brand. It's crucial that they have a positive experience. NCR SelfServ ATMs are intuitive and user-friendly, designed to make everyone an expert user, right from the start. And not just customers; our equipment is intuitive for branch staff, cash-in-transit companies and service engineers as well, to help keep downtime to a minimum.

NCR SelfServ ATMs conform to all worldwide accessibility regulations. 90% of men and 99% of women can use our equipment without stooping, crouching or stretching.

Our range also features:

- Common fascias and fascia layouts across the range for a consistent look and feel
- Flashing media entry/exit indicators on every slot to guide users through each transaction
- Laser-free 2D barcode scans that work even in strong sunlight
- Touchscreen and FDK displays in both 12" and 15" sizes on every model, for crisp, clear transactions

Informed Manageability

When it comes to smart, cost-efficient network management, having the right information is essential. NCR SelfServ puts critical information at your fingertips, so you can see, understand and control your entire network — and make more empowered decisions. NCR SelfServ is also designed to make upgrades and training easier, to save you time and money.

- Firmware can be downloaded remotely for each NCR SelfServ module, accelerating what was once a labor-intensive task
- NCR SelfServ has its serial number permanently, electronically "burned in" on the production line, so you'll always know the identity and whereabouts of every ATM. Every major module has its own electronic serial number, too, so you'll know if a machine has been fitted with an updated part
- Modules are common across the range, so staff trained with one model are immediately familiar with others, for faster, easier training
- All through-the-wall models are designed to fit the same hole as NCR Personas™ and other vendors' ATMs, reducing installation costs and saving time
- NCR offers a comprehensive portfolio of managed services, including first and second line maintenance, cash and incident management, help desk and more, to help you minimize downtime and get the most out of your network

Intrinsic Security

When it comes to protecting personal and corporate data and assets, there's no room for compromise. Security breaches can undermine confidence in your ATM channel and your brand. That's why at NCR, we are continually investing in new technologies and best-in-class countermeasures to fraud. Security is an integral part of NCR SelfServ, built in at the design stage and strengthened by NCR services and software.

- NCR SelfServ is the first ATM to introduce a protected USB architecture that's self-contained within the ATM, to prevent the fraudulent connection of unauthorized USB devices
- NCR SelfServ's cash deposit and recycler modules validate every note twice before accepting or crediting, to minimize the risk of counterfeit notes being deposited or circulated
- NCR's Solidcore for APTRA™ — our industry-leading ATM software — allows only known and authorized code to run, for a proactive approach to industry threats.

Committed Responsibility

Today, consumers and corporations alike recognize how important it is to take care of the environment. From design and manufacture, through day-to-day operation, to end-of-life disposal, NCR believes that environmental responsibility should inform every stage of a product's life.

- Our "Design for Environment" team works on continuous improvement of environmental attributes and impact of our products and ensures compliance with all regulations and legal obligations
- We continuously strive to improve our products for reduced energy consumption, elimination of hazardous materials and reduction of waste:
 - 25% less internal cabling
 - Energy-efficient Intel® CoreDuo™ processors that give off 60% less heat
 - 2ST printing technology and dual roll capabilities reduce paper usage
