# Industrial Refrigeration Stop Valves

## SVA, SVA-ST, SVA-HS & SVA-SS

SVA are angleway and straightway stop valves which are designed to meet all industrial refrigeration application requirements.

The valves are designed to give favourable flow characteristics and are easy to dismantle and repair when necessary. The valve cone is designed to ensure perfect closing.

### Features

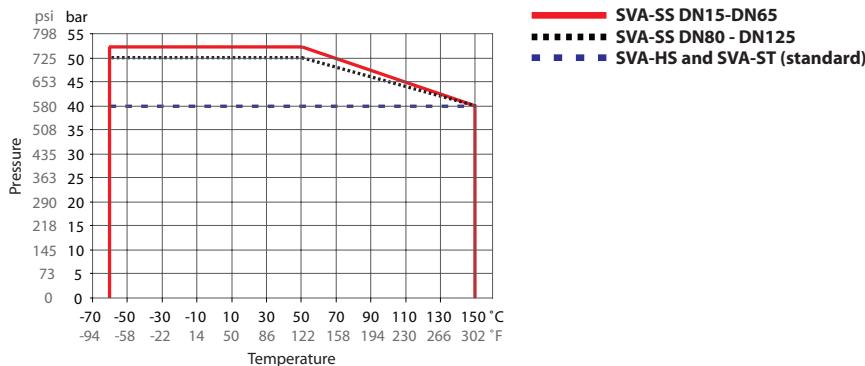

- Applicable to all common refrigerants including R717 and non corrosive gases/liquids dependent on sealing material compatibility.  
For CO<sub>2</sub> applications the SVA-S and SVA-L stop valves have to be used (SVA-S and SVA-L valves have a max. working pressure of 50/52 bar). For further information please see the technical brochure DKRCI.PD.KD1.A.
  - Optional accessories:
    - Heavy duty industrial hand wheel for frequent operation
    - Cap for infrequent operation
    - Lock washers for the stop valves subjected to high vibrations/pulsations
  - Available in angleway and straightway versions with standard bonnet or extended bonnet (15-100) for insulated systems
  - Each valve type is clearly marked with type, size and performance range
  - The valves and caps are prepared for sealing, to prevent operation by unauthorized persons, using a seal wire
  - Internal metal backseating
    - DN 6 - 65 (1/4 - 2½ in.)
    - Internal PTFE backseating
    - DN 80 - 200 (3 - 8 in.)
  - Can accept flow in both directions
  - Standard bonnet is suitable for installation in normal insulated systems
  - Housing and bonnet material for SVA-ST and HS are in low temperature steel according to requirements of the Pressure Equipment Directive and other international classification authorities
  - SVA-SS housing is made of special cold resistant stainless steel approved for low temperature operations.
  - Stainless steel bolts.
  - Maximum allowable working pressure and temperature range
- Standard applications**

## Stop valves for industrial refrigeration, type SVA, SVA-ST, SVA-HS and SVA-SS

### Pressure and temperature range

### Additional features for high spec. version (SVA-HS)

- Low temperature version with extended bonnet for insulated low temperature applications.
- Can be used in chemical and petro-chemical applications.

- Stainless steel packing gland with special teflon low temperature spindle seal.
- Temperature range:  
*High spec. version*  
-60/+150°C (-76/+302°F)

### Design

#### Connections

Available with the following connections:

- Butt-weld DIN (EN 10220)
- Butt-weld ANSI (B 36.10 Schedule 80),
  - DN 6 - 40 (1/4 - 1½ in.)
- Butt-weld ANSI (B 36.10 Schedule 40),
  - DN 50 - 200 (2 - 8 in.)
- Socket Weld (ANSI B 16.11),
  - DN 15 - DN 50 (½ - 2 in.)
- Outside pipe thread
  - G 1/2 in. - G 7/8 in. (ISO 228/1)
- FPT Female Pipe Thread, NPT  
(ANSI/ASME B 1.20.1),
  - DN 15 - 32 (½ - 1¼ in.)

#### Housing

Made of special, cold resistant steel (SVA-ST, HS) or stainless steel (SVA-SS) approved for low temperature operations.

#### Valve cone

The valve cone can be turned on the spindle, thus there will be no friction between the cone and the seat, when the valve is opened and closed. A teflon tightening ring provides perfect sealing at a minimum closing momentum.

#### Spindle

Made of polished stainless steel, ideal for O-ring sealing.

#### Packing gland

Standard version (SVA 6-10 and SVA-ST):  
The standard packing gland ensures a perfect tightness in the range: -50/+150°C (-58/+302°F). The packing glands are equipped with a scraper ring to prevent penetration of dirt and ice into the packing gland.

#### Stainless steel version (SVA-SS):

The stainless steel packing gland comprises a spring loaded seal packing gland which ensures a perfect tightness in the range: -60/+150°C (-76/+302°F).

The packing glands are equipped with a scraper ring to prevent penetration of dirt and ice into the packing gland.

#### High spec. version (SVA-HS):

This comprises a threaded bush equipped with teflon wear rings to prevent damage of the spindle surface. In addition, a scraper ring is mounted to prevent dirt and ice to penetrate into the packing gland. The sealing consists of conical shaped teflon rings supported by metal bushings and ensures a perfect tightness in the range: -60°C/+150°C (-76°F/+302°F).

#### Pressure Equipment Directive (PED)

SVA-ST and SVA-HS valves are approved according to the European standard specified in the Pressure Equipment Directive and are CE marked.

For further details / restrictions - see Installation Instruction.

#### Installation

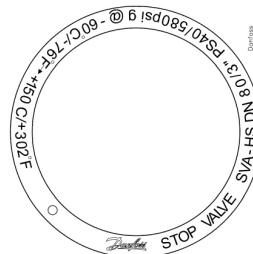

It is recommended that the valves be installed in the direction of flow indicated by the arrow on the valve body. The valve can be installed in the opposite direction but this slightly reduces the  $k_v$ -value ( $C_v$ -value).

The valve is designed to withstand high internal pressure. However, the piping system in general should be designed to avoid liquid traps and reduce the risk of hydraulic pressure caused by thermal expansion.

For further information refer to installation instructions for SVA.

## Technical data

- Refrigerants (SVA 6-10 and SVA-ST)  
Applicable to all common non flammable refrigerants including R717 and non corrosive gases/liquids dependent on sealing material compatibility. For further information please see installation instruction for SVA.  
For CO<sub>2</sub> applications the SVA-S and SVA-L stop valves have to be used. For further information please see the technical brochure DKRCI.PD.KD1.A.
- Refrigerants (SVA-HS)  
Applicable to all common refrigerants including flammable hydrocarbons and all non-corrosive gases/liquids. For further information please see installation instruction for SVA-HS.
- Temperature range  
Standard version (ST):  
-50/+150°C (-58/+302°F).  
High spec. and stainless steel version (HS and SS):  
-60/+150°C (-76/+302°F).
- Pressure range  
The valves are designed for max. working pressure 40 bar g (580 psi g). Valves for higher working pressure are available on request.  
SVA-SS are designed for max. working pressure 52 bar (754 psi g).
